Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A Note: this material was purified beta chain; the beta chain apparantly was not blocked of Comment: The amino terminal Met of the beta chain is preceded by a strongly predicted of comment: The amino terminal Met of the beta chain is preceded by a strongly predicted; comments of a second of the alpha chain region. This suggests that express constructs.

A Start codon: GTG

C, Superfamily: aspartate kinase, aspartate kinase homology

C, Keywords: alternative initiators; heterotetramer; lysine biosynthesis; phosphotransfers F; 2-245, Product: aspartackinase II alpha chain #status predicted <ALH>
F; 2-46-411/Product: aspartate homology <ALKIN
F; 2-46-411/Product: aspartokinase II beta chain #status predicted <BET>

aspartate kinase (EC 2.7.2.4) II - Bacillus stearothermophilus
M.Alternate names: aspartickinase II
C;Alternate names: aspartickinase II
C;Species: Bacillus stearothermophilus
C;Date: 10-May-1996 #sequence\_revision 19-Jul-1996 #text\_change 18-Jun-1999
C;Accession: UG440
C;Accession: UG440
C;Accession: UG440
C;Accession: UG440
A;Title: Sequence of the Bacillus stearothermophilus gene encoding aspartokinase
A;Title: Sequence of the Bacillus stearothermophilus gene encoding aspartokinase
A;Accession: UG4640

A;Cross-references: GB:L46351; NID:g928810; PIDN:AAB06216.1; PID:g928811
C;Comment: This enzyme is the first key enzyme in the biosynthetic pathway of the aspart: C;Genetics:
A;Gene: ask

ಹ

Applicate kinase (EC 2.7.2.4) II precursor - Bacillus sp. (strain MGA3)
NyAlternate names: lysine-sensitive aspartckinase II
NyAlternate names: lysine-sensitive aspartckinase II
NyChternates: aspartckinase II alpha chain; aspartckinase II beta chain
CySpecies: Bacillus sp.
CyDate: 21-Jan-1994 #sequence revision 24-Feb-1995 #text\_change 18-Jun-1999

Event=Alternative initiation;

Comment=2 isoforms, Alpha/Aspartokinase II alpha subunit (shown here) and Beta-Aspartokinase II beta subunit, may be produced by alternative initiation;

-!- SIMILARITY: BELONGS TO THE ASPARTOKINASE FAMILY.
                                                                                                         6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             aspartate.
-!- ENZYME REGULATION: LYSINE-SENSITIVE (BY SIMILARITY).
-!- PATHWAY: FIRST STEP IN THE COMMON BIOSYNTHETIC PATHWAY LEADING
-!- STEPM ASP TO DIAMINOPIMELATE AND LYS, TO MET, TO ILE AND TO THR.
-!- SUBDNIT: Tetramer consisting of 2 isoforms Alpha (catalytic) ar isoforms Beta (function not known).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Event=Alternative initiation;
Comment=2 isoforms, Alpha/Aspartokinase II alpha subunit (shown here) and Beta/Aspartokinase II beta subunit, are produced by alternative initiation;
-:- SIMILARITY: BELONGS TO THE ASPARTOKINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              aspartate.
-!- BNZYME REGULATION: LYSINE-SENSITIVE.
-!- PATHWAY: FIRST STEP IN THE COMMON BIOSYNTHETIC PATHWAY LEADING
FROM ASP TO DIAMYNOPPHRELATE AND LYS, TO MET, TO ILE AND TO THR.
-!- SUBUNIT: Tetramer consisting of 2 isoforms Alpha (catalytic) and isoforms Bete (function not known).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         J. Biol. Chem. 263:9526-9532(1988).
-!- CATALYTIC ACTIVITY: ATP + L-aspartate = ADP + 4-phospho-L-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-88243347; PubMed=2837491;
